

## Kiwitechnics BCR2000 v3 Release Notes

This is patch support for Kiwitechnics Product using the Behringer BCR2000 controller

These patches will install into the following slots on the BCR2000 so if you have patches in these slots you wish to keep these will need to be moved. See the BCR2000 user guide for instructions about this as we are not able to provide any additional support regarding the BCR2000 product.

Slot 1 – Kiwi8P

Slot 2 – Kiwi106

Slot 3 – KiwiSix

Slot 4 – Kiwi3P

Slot 5 – KiwiPE

Slot 6 - Kiwi1000

Download instructions are

- 1) put the BCR2000 into midi mode – see Behringer manual on how to do this
- 2) send the sysex file(s) for the product you wish to load to the BCR using a midi library manager such as midiOX.

As the file is downloaded you will see the display on the BCR rotate. If this does not happen then there is a midi send problem. We are not able to provide support for problems.

All BCR patches have been made with midi channel 1 so the synth(s) will need to match this for them to work or you can edit the patches to change the midi channel.

There is a mapping graphic supplied with each patch. We have tried to make the positioning of controls consistent across all products as much as possible. We have also tried to group controls where they will be most useful.

These patches are not compatible with the Synthgraphic overlay. If you wish to use this overlay you will need to download the synthgraphic Kiwi-3P BCR2000 patch from <http://synthgraphics.com/kiwi-bcr.html>
